

LNG CARRIERS
Updated on 08/10/2014

The following LNG carriers are currently accepted at the Panigaglia Terminal:

Name	Technical Volume ⁽ⁱ⁾ of the LNG Carrier (m ³ of GNL)
LNG Portovenere	65,262
LNG Lerici	65,299
SCF Arctic (ii)	67,777
SCF Polar (ii)	67,777
Ceikh El Mokrani ^{(ii), (iii)}	71,791
Gaz de France Suez Global Energy ⁽ⁱⁱ⁾	68,111

(1) The "Technical Volume" is the volume of the LNG carrier declared by the User during the procedure for approval of the LNG carrier.

(2) For the ship in question, access to the Terminal in accordance with the "Ship Approval Procedure" is only allowed under specific technical and operating conditions, as follows:

a. The maximum draught of the ship is compatible with the depth of the berthing area;

b. The height of the median of the manifold arms is not greater than 18 metres above the surface of the water;

(iii) The value in metric tonnes declared by the User as part of the approval procedure has been converted into m³ assuming a LNG density of 450 kg/m³
