

# APPLICATION OF RESOLUTION 353/2013/R/GAS

- Publication of additional withdrawal capacity according to resolution 353/2013/R/gas ( $CE_{353tot}$ ) on Thursday of every week;
- Allocation to the Users of Peak Modulation Service, Flat Modulation Service and D.Lgs 130/10 Service according to the following formula:

$$CE_{353,k} = CE_{353tot} \cdot \frac{\max((G_{k,GGpubb} - G_{k,contr}); 0)}{\sum_k (G_{kGG,pubb} - G_{k,contr})}$$

where:

- $G_{k,GG,pubb}$  is equal to User-k gas in stock at 06:00 of the Gas Day when the publication of the additional Withdrawal Capacity ( $CE_{353tot}$ ) is made.
- $G_{k,contr}$  is equal to the User-k contractual gas in stock estimated at 06:00 of the Gas Day when the publication of the additional Withdrawal Capacity ( $CE_{353tot}$ ) is made.

It is understood that the sum is calculated considering only the Users of the Peak Modulation Service, Flat Service and of D.Lgs 130/10 Service whose difference is positive.

- Communication via SAMPEI Portal of the share due to each User;
- For the following week, the Withdrawal Capacity available for User-k is equal to:

*Allocated Withdrawal Capacity<sub>k</sub> × Multiplying coefficient ex DM 15/02/2013 \* Withdrawal Adjustment factor<sub>k</sub> +  $CE_{353,k}$*
