

PUBLICATION PURSUANT TO ART. 9.4 OF RESOLUTION 85/2014/R/GAS

1. Criteria for establishing the extra withdrawal capacity according to resolution 353/2013/R/gas

Based on the most recent withdrawal data available, STOGIT establishes, each Thursday for the following week, the extra withdrawal capacity according to resolution 353/2013/R/gas taking into account the system constraints *“ensuring that, even assuming that it will be entirely nominated, a level of performance not lower to the maximum ones associated to the allocated capacities will be maintained along with the necessary technical security factors for the system integrity”*.

The extra withdrawal capacity is calculated through specific simulations according to Resolution 625/2013/R/gas, based on the difference between the actual amount of gas withdrawn and the amount of gas available for withdrawal considering:

- Allocated withdrawal capacities guaranteed up to the end of the withdrawal phase taking into account the necessary security factors for the system integrity;
- Guarantee of performances in case of necessity for ensuring the national gas system integrity

2. Criteria for establishing the extra withdrawal capacity according to point 1, letter b) of Resolution 552/2013/R/gas

STOGIT makes available the extra withdrawal capacity according to Resolution 552/2013/R/gas as a function of a lower amount of gas withdrawn during the week end, based on historical data of the past years, compared with the contractual withdrawal capacity.
